Umesh Solanki

Programmer

Profile

- I'm An ardent fresher with highly motivated and learning skills and I want to grow my skills by learning new technology. currently I'm pursuing my bachelors of Engineering degree in Information Technology.

- I'm Strong in design and integration with intuitive problem-solving skills. And I'm Passionate about implementing and launching new projects and learning new technology. Looking to start the career as an entry-level programmer with a reputed firm driven by technology.

Projects

- **Arogya Card (final year project)**

  Currently I'm working on my final year project titled Arogya card which stores the health related reports on clouds and can access anywhere and anytime.

- **Voice Based Whatsapp chatbot Project link:** whatsapp chatbot

  This is the python script that enables you to send a message through your voice command , in this first it'll ask you that whom you want to send the message and then it'll click automatically that contact and then click on the textbox and then it'll ask for your message and send it to the receiver.

- **Keylogger   Project link:** Keylogger

  This project is based on cybersecurity concept and it's designed to record the keystrokes made by a user and send it to back to third party. This project is made using python language and I made this project for information to learn how attacker will get our password and information .

- **Voice chatbot   Project link:** voicebot

  I made this project using python and NLTK platform to work with human language data and I use speech recognition and sklearn library . basic functionality of this project is it'll take the voice input from user and that input is anything like a questions , greeting word and give the appropriate response based trained data that we proved while training.

- **City Air Purifier (SSIP Project)**

  Our team participated and was selected in student startup policies (SSIP) and we where funded for next phase.
